Inbal Nitzani

Full Stack Software Engineer

inbalnitzani@gmail.com | +972-54-4886331 | Tel Aviv, Israel | LinkedIn | GitHub | itch.io

PROFESSIONAL SUMMARY

Full Stack Software Engineer specializing in distributed backend systems on AWS and Kubernetes, the React interfaces built on top of them, and AI powered developer tooling built on the Claude Agent SDK. A proven track record owning platform level systems end to end in a fast moving startup environment, from backend architecture through the UI, including a self serve audience targeting platform live ops and marketing rely on daily. Curious by nature, regularly building extra tools, from cost calculators to internal AI agent tooling, whenever a gap shows up.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C#, C++, C, SQL
Cloud & Infrastructure: AWS (Athena, Neptune, DynamoDB, S3, SQS, Lambda, AppSync Events), Kubernetes, Docker, CI/CD (GitHub Actions)
Backend & Data: Node.js, Express, REST APIs, Redis, Gremlin, Hive Partitioning, Event Driven Workers, Supabase (PostgreSQL)
Frontend: React, Angular, Vite, Tailwind CSS, HTML5/CSS3
Tools: Git, Claude, Claude Skills (AI Agents), Cursor, Google Apps Script (clasp), Airtable API, Slack API, Postman, Jira

PROFESSIONAL EXPERIENCE

Whalo, Software Engineer — 2026 - Present

Audience targeting and high volume push messaging platform for mobile games (TypeScript, Node.js, React, AWS, Kubernetes)

- **End to End Platform Ownership:** Sole engineer on a self serve audience targeting platform (Node.js, React, AWS Neptune) that replaced manual Airtable workflows for live ops, marketing, and operations staff, with nested boolean targeting logic (AND/OR/NOT) across hundreds of live segments and groups, version history, hierarchical dependencies, and safe updates that propagate consistently across related ones.
- **Push Infrastructure at Scale:** Rebuilt the targeting and delivery layers of the push notification system, replacing legacy SQL and in memory set intersection with a rule tree compiler that runs boolean targeting logic as correlated EXISTS subqueries in AWS Athena, shipped with no cutover. Hardened delivery with DynamoDB deduplication and Redis based jitter, built to handle millions of push notifications a day, up to 4M.
- **Platform Architecture & Foundations:** On Whalo's newly formed platform team, built shared libraries from scratch, including the DynamoDB data access layer and the Neptune graph client, and worked with the team lead to establish the boilerplates, design patterns, and conventions every subsequent backend service on the team was built on.
- **Business Tooling & Automation:** Routinely engineered background workers, Kubernetes scheduled jobs, and AWS Lambda functions across projects. Built a Google Sheets add on that kicks off an event driven worker polling a folder for new files synced to S3 and Google Drive, then using the Google SDK and Apple API to batch generate up to 20 in app purchase product IDs, replacing an 11 step manual App Store Connect flow. Also built a CronJob syncing the reward catalogue between Airtable and Google Sheets.
- **Initiative & AI Tooling:** Built a proof of capability for the AWS AppSync Events WebSocket protocol from scratch during a hackathon week, unblocking the Unity client team ahead of backend availability. Independently built an AWS cost calculator and an event driven webhook router that dispatches incoming events to Claude Skills, now used internally for automated triage and review workflows.

Freelance, Software Engineer — 2025 - 2026

Web platform for a client in the music licensing industry (React, Tailwind CSS, Supabase/PostgreSQL)

- **Song Catalog & Licensing Calculator:** Built a full stack platform solo (React, Supabase/PostgreSQL) for customers to search a catalog of about 1,000 songs by title, writer, or keyword, and get an instant price from a calculator driven by production type, media, territory, and usage length, logging every quote for internal follow up.
- **Admin Tools & AI Song Search:** Built an admin console to add, edit, and remove songs and metadata, and to export selected song lists to PDF, Excel, or Word, behind secure authentication. Built a Claude Skill that shortlists catalog songs for a creative brief by translating it into keyword tag searches and verifying lyrical fit before recommending.

NanoLock Security, Software Engineer — 2023 - 2025

OT/IoT device security platform for critical infrastructure and industrial environments (Angular, TypeScript)

- Sole frontend engineer on the Management of Things (MOT) platform, the company's enterprise console for OT/IoT device security across dozens of device types and PLC vendors. Owned the client side architecture end to end, working cross functionally with the backend team to integrate a microservices architecture into the UI.
- Designed and built the Groups page, the platform's highest impact access control feature for managing device and user permissions, and built real time data visualization and reporting tools letting administrators filter and export large scale security audit logs to CSV/PDF.

EDUCATION

Shenkar College, M.Des in Digital Game Design & Development — **Oct 2025 - Present**
The Academic College of Tel Aviv-Yaffo, B.Sc. in Computer Science — **2020 - 2023**

VOLUNTEERING & MILITARY SERVICE

Etgarim Sailing Program: volunteer skipper assistant supporting individuals with special needs (since 2025) | Lone Soldiers Center: volunteer (since 2017) | IDF Maglan Special Forces Unit, Head of Media Department (2015-2017)
